- [Summary](#)

## Definition Lists

HTML and XHTML supports a list style which is called definition lists `<dl>` where entries are listed like in a dictionary or encyclopedia. The definition list is the ideal way to present a glossary, list of terms, or other name/value list.

Definition List makes use of following two tags.

1. `<dt>` - A term
2. `<dd>` - Term definition

Here's a sample code.

COPY

```
<!DOCTYPE html>
<html>
    <head>
        <title>HTML Definition Lists</title>
    </head>
    <body>
        <dl>
            <dt>HTML</dt>
            <dd>HyperText Markup Language.</dd>
            <dt>XHTML</dt>
            <dd>EXtensible HyperText Markup Language.</dd>
        </dl>
    </body>
</html>
```

Output:

## Summary

- The `<dl>` tag defines the description list, the `<dt>` tag defines the term (name), and the `<dd>` tag describes each term.

COPY

```
<dl>
  <dt>Coffee</dt>
  <dd>- black hot drink</dd>
  <dt>Milk</dt>
  <dd>- white cold drink</dd>
</dl>
```
